

## Aircraft Hanger Freight Lift

## The Challenge

Knight Aviation needed to safely transport heavy, bulky and awkwardly shaped items from the ground to the second level of their aircraft hanger.

## The Autoquip Solution

Our dealer Roy Block of Block-Dickson worked closely with the customer during this process. This gave us a complete understanding of expectations and needs in order to get the job done.

Autoquip selected the economically priced Freightlite, which takes up less space and handles load capacities up to 1,500 lbs. The Freightlite was ideally suited for the project requirements, especially given the constraints of the location.

## The Solution Benefits

The Freightlite meets all project requirements by moving various cargos within the space limitations. It is also durable, competitively priced and meets all safety requirements.
