

## American Single Arm Lift & Tilt Peanut Dumper

## The Challenge

A Georgia peanut manufacturer wanted to improve their production time and wanted a solution for getting the peanuts onto a conveyor system that was fast and efficient.

## The Autoquip Solution

We designed a single arm lift & tilt with a hopper fixed to the platform deck. The lift is raised and tilted, and the hopper door manually slides open to dispense the peanuts onto their conveyor.

AQ Project Ref. #137961

## The Solution Benefits

The American Single Arm lift & tilt equipment combination has optimized processing speed for the peanut processors helping them achieve efficiency in their operations.
