

Series 35 Scissor Lift Used to Move Caskets

The Challenge

There was not an easy solution for moving a casket to the pulpit for funeral services at a local church besides carrying and lifting the casket up a flight of stairs.

The Autoquip Solution

The solution was to install a Series 35 lift and position in a shaft way under the pulpit. The lift raises the casket from ground floor through the shaft way, up to the church pulpit, and positions the casket for viewing during funeral services.

The Solution Benefits

The Series 35 Lift has provided an easier solution of getting the caskets to the pulpit by eliminated the manual task of lifting and carrying them up a flight of stairs.
