

Truck Leveler Provides Efficient Access to Dock Loads

The Challenge

Kasa Industrial Controls, a global provider of industrial controls to manufacturing companies needed a truck leveler to help level truck beds to the dock height at their Salinas, KS facility.

The Autoquip Solution

Autoquip supplied Kasa with a shallow pit – surface mounted truck leveler. They use the truck leveler when there is a height difference between the truck bed and the dock making an easy transition for preparing the loading/offloading process.

The Solution Benefits

Autoquip's Truck Levelers provide flexibility at the dock by lifting and positioning the trailer bed for better access.
