

High Capacity Tilter: Tilts Valves for Oil & Gas Industry

The Challenge

A manufacturer of valve solutions for the oil and gas industry is looking to add two high capacity “PacMan” tilters to their assembly plant. Knowing that Autoquip has the experience and history building these types of tilters, they turned to us to replicate the style and functionality.

The Autoquip Solution

Autoquip engineered the [high capacity tilters](#) to the required specs including a wide cut out in the platform to hold the valve in place as it tilts to the other side. This style of tilter is designed to rotate within its own footprint, taking up less floor space.

Model: PAC-40

Capacity: 40,000 lbs.

Platform: 72”X66”

Travel: 90 degrees

AQ Project Ref.#123242 9FF-27721

The Solution Benefits

We offer lifting and tilting solutions to suit the most specialized applications. It's because of this reputation, the customer turned to us to build their new "PacMan" tilters.

- Mechanical robustness to handle high capacity loads
- 90 degree tilt improves access to the product
- Tilts in: 30 seconds
- Small Footprint – does not extend past base frame while in tilt position
