

Portable Dock Lift for Unloading Forensic Research Supplies

The Challenge

The Forensic Science Center at the University of Central Oklahoma needed a dock lift at their facility to assist in the offloading of their research supplies. No dock exists at the facility so they needed a portable solution that would be easy to move around their parking lot area.

The Autoquip Solution

Autoquip recommended a PDQ dock lift with 60" travel. The PDQ is built with solid steel construction includes hinged approach ramp on one side, and a throw-over bridge on the other to make pass through of supplies quick and efficient.

The Solution Benefits

The PDQ dock lift has made the process of bringing the supplies into the forensic center easier and flexible since the dock lift can be moved from the parking lot closer to the buildings entrance.
