

Powered Turntable for Metal Sculpture

The Challenge

To build a powered turntable for an art collectors metal sculpture where it could be set on a continuous rotation for display in his gallery.

The Autoquip Solution

Autoquip engineered a powered turntable with continuous duty drive and speed ranges of 0-3.5 RPM by using variable speed drive and prewired controls. Removable guarding placed around turntable to provide protection and design appeal.

The Solution Benefits

The customer is very happy with the turntable and commented that it is working like a “gem”.
