

Work Platform Lift with Custom Handrail Configuration

The Challenge

A manufacturing company that develops and produces lightweight composites and lightweight solutions for construction applications needs a work platform lift that will allow their employee's enough space on each side of the platform to stack the materials and move them to the press machine.

The Autoquip Solution

Autoquip provided a pit mounted American Tork Lift with custom handrail configurations. The pit mounted lift is flush with the floor and the handrails surround each side of the pit. They are adjustable and removable to allow for increased usable space so someone can stand on either side of material stacks.

Includes: Remote Power Unit, Platform Mounted Footswitch, Electric Toe Guard, Tube Leg Set for increased side load capacity.

The Solution Benefits

Autoquip has supplied the customer with (2) similar lifts in the past that they have been very satisfied with the performance and function. The new unit order they have requested will be used for the same application,

except this time Autoquip will align the leg set parallel with the press instead of perpendicular to increase the side load.
