

XLR Scissor Lift Raises Tool Cart to Improved Ergonomic Height

The Challenge

A major automobile manufacturer wanted to reduce risk of injuries and discomfort of their operator stations by elevating their tool carts to a more reachable and accessible height.

The Autoquip Solution

A hydraulic XLR pan-style scissor lift is designed with its ground-level loading capability. A flip latch was added for safety measures – a photo eye indicates when the latch has been flipped over and in place before the lift can operate. Fixed guards have been added to protect other workers from walking up to active equipment.

The Solution Benefits

Autoquip knows the importance of safety throughout the automobile industry. The XLR provides a safe and efficient solution to handle various heights needed for operators to better access their tool carts.
